

NEW TRASDATA : 1453_NT_BOSCH_EDC16CU34_XROM_MPC562_EGPT_VAG

The first time you work with New Trasdata on EDC16/16+ ECUs of the VAG group it is mandatory to run the Patch Function to remove the antituning systems.

Sequence of operations:

- 1) Read the full ECU file
- 2) Click the button **PATCH** that has been enabled after the read
- 3) New Trasdata will automatically apply the patch to the specific memory and also correct the checksum of the file
- 4) The system will automatically save a new file with the new format ***_patched.dim** (the new file will be listed in the **File List** tab)
- 5) Extract the tuning file from the **_patched.dim** file and use it to make the tuning.
- 6) Write the modified tuning file with New Trasdata

To recover the car to its stock conditions use the original .dim file read
The Patch Function must be performed **ONLY** the first time you work on the ECU, the following modifications can be performed writing a file extracted from the _patched.dim file

ECU CONNECTOR
